

Irrigation

The Concept

We design the most economical and efficient watering system for your garden utilizing a range of professional products and the latest technology. A computer controls the flow of water to the relevant zones. We can install hidden sensors in the ground that calculate the moisture level for each part of the soil in the garden. This ensures that there is no excess watering, thereby saving you money and water.

Our range includes an automatic controller which either increases or decreases the supply of water, depending on the weather conditions. The system stops the flow of water when the soil is wet and triggers its commencement as and when required. The watering system can be programmed to work at any time to minimise inconvenience to you or your neighbours, i.e. early mornings/overnight.

We will provide you with a full explanation of our products and how they work, together with an initial estimate of cost on our first visit. We supply a specification, bill of quantities and a detailed quotation, which will be based on strategy, budget and time. Our quotations are fixed and firm, with no hidden extras and are tailored to suit the individual. We use exclusive equipment supplied by top manufacturers, all of which is installed by our own fully trained staff.

We will send a written quotation within a week of the site survey and aim to carry out the installation promptly.

Our Reputation

Life Irrigation works in conjunction with many trade partners, such as landscape designers, architects, building contractors and gardeners, as well as members of the public directly. Working with members of the trade is a prelude to our high standard of care and workmanship. We will be able to provide references upon request.

When we complete our work, the site is left clean, the trenches are refilled and the ground is compacted so that only the "stitches" are barely visible on the lawn. Under normal conditions any marks disappear within 2 - 3 weeks.

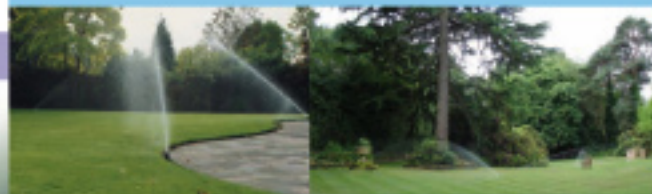

We are very proud of the service we provide.

Eco Drip Irrigation System

We have the perfect solution for irrigation of slopes and uneven surfaces, furnished gardens or car park environments. The Ecodrip™ is a surfaced or sub-surface irrigation that is ideal for such areas, as it replaces sprinklers and avoids water splashing as well as having an anti siphon mechanism, thus preventing flooding in lower areas. Water distribution is even throughout the zone at 1.7 litres per hour per drip whether it is nearest or farthest from the water source. Each drip has a patented self cleaning mechanism. It is also ideal for irrigating roof terraces. As the sub-surface irrigation is invisible it can be activated day or night.

Benefits

- Conserves Water - a reduction in water costs
- Highly efficient and saves both time and energy
- A special sensor to work in conjunction with weather cycles
- Go on holiday without worrying about your plants
- Increased plant life
- Night time watering

Warranty

We offer a one year free warranty and an optional two year wear and tear warranty that covers all parts and labour of the system.*

*Does not cover accidental or malicious damage.

Support

We pride ourselves on the level of support provided to our customers for years to come after the initial installation. During the winter months, we provide a draining down of the system service and re-commissioning in the spring. Our team can usually be on site within 24 hours of call-out to attend to any problems. We always keep in touch with our customers.
